

T 230 F

Tractor with fixed 5th wheel

T 230 F

The T 230 F is our latest and fittest for purpose terminal tractor designed and built to the most exacting standards and without compromise. This new generation of terminal tractors exceeds the strictest requirements for drivability, comfort and productivity as well as yielding the lowest cost per move in addition to the lowest cost over lifetime.

The success of the T 230 F stems from MAFI's consultations with their discerning clients, with operations, engineering, finance and the drivers themselves not only in Europe but globally resulting in this ultimate tractor that is an unmatched fit for purpose tool for the successful LoLo operation.

In general the trailer and tractor only detach during maintenance whilst the elevating 5th wheel is ordered as a standard. The MAFI T 230 F is equipped with a fixed 5th wheel for lower investment

and less maintenance. The frame structure made of high grade steel is key for the design of the F version and can also be equipped with active up to 14ton air suspension for a smoother ride while unladen. Due to the robust design the MAFI T 230 F can go up to a GCW of 90 tons and a wide range of options is available.

This design is to ensure the T 230 F moves heavy containers safely and efficiently as today's fast-paced container terminal operations need high-performance, easy-to-operate and reliable handling equipment. The MAFI T 230 F has been designed to meet the needs of modern terminals, combining excellent visibility with the highest operational efficiency available.

The MAFI Eco Mode (MEM) function reduces fuel consumption by keeping the tractor running in its most economical range. For further technical details please refer to the Technical Data sheet T 230.

With fixed 5th wheel.

Frame structure made of high grade steel.
